# Triune Falsify-Me Abstract 28

## 1. **28. Primordial Magnetism and EM Structuring**

We explore the idea that early electromagnetic structuring, linked to a triune “electric-first” phase, seeds primordial magnetic fields without generating magnetic monopoles. A coherent EM template at very early times constrains field topology so that only closed flux structures survive, explaining both the existence and coherence of cosmic magnetism and the absence of isolated magnetic charges.

Falsification: future constraints on primordial magnetic fields (from CMB polarization and gamma-ray observations) either demand chaotic initial conditions incompatible with such a template or require monopole remnants.
