Triune Falsify-Me Abstract 32

1. 32. **Sagittarius Dwarf Resonance and Extinction Timing**

We connect the hazard lattice to the orbital resonance between the Milky Way and the Sagittarius dwarf galaxy. Periodic passages through the galactic plane and associated tidal effects are modeled within a triune gravitational field, producing windows of enhanced impact flux and geophysical stress. The claim: a specific alignment of these passages with lattice nodes can explain clustered mass extinctions and radiations. Falsification: better orbital reconstructions and crater chronologies show no statistically significant correlation once biases are corrected.
