Triune Falsify-Me Abstract 33

1. **33. Boomerang Symmetry and Earth's Midpoint Node**

We highlight a “boomerang symmetry” in Earth's history: the Great Oxidation Event sits near the temporal midpoint between planetary formation and the present, with mirrored patterns of crises and innovation on either side. Interpreted through triune cosmology, this symmetry reflects a larger curvature cycle in which our local environment has already begun to turn back toward a future state. The claim is that this is an observable echo of cosmic-scale triune dynamics. Falsification: more detailed geologic and biologic timelines break the symmetry beyond plausible error bounds.
