# Triune Falsify-Me Abstract 37

## 1. **37. Quantum Cycles as Fractal Echo of Triune Cosmic Cycles**

We map the cosmic triune cycle (coherence at singularity, separation at bang, decoherence at entropy dominance, re-coherence at collapse) onto the quantum sequence (coherent state, superposition, decoherence, collapse, renewed coherence). The proposal is not that they are identical, but that they share a common structural template. The claim is that this analogy can be made precise using information-theoretic measures and that it leads to predictions about how large-scale structure influences quantum processes. Falsification: attempts to formalize the mapping either reduce to trivial analogies or contradict known quantum-field-theory behavior.
