Triune Falsify-Me Abstract 38

1. **38. Quantum Potential of Hydrogen (QpH) as Template Field**

We treat the quantum potential of hydrogen as a physical “template field” that sets boundary conditions for early electromagnetic and gravitational behavior. In this picture, hydrogen is not just the first atom but the seed of coherence that shapes triune force splitting and EM structuring. The claim is that certain cosmological and astrophysical signatures (e.g. specific relations between hydrogen abundance, magnetism, and large-scale structure) follow from this template role. Falsification: detailed cosmological and laboratory tests show no trace of the predicted correlations, reducing QpH to a mathematical curiosity rather than a physical actor.
